Clinical Guidelines: Management of Essential Hypertension

Hypertension is defined as a persistent systolic blood pressure of 130 mmHg or greater or a diastolic blood pressure of 80 mmHg or higher according to standard clinical guidelines.

First-line lifestyle interventions include the DASH diet, sodium restriction below 1500mg daily, aerobic exercise for 150 minutes weekly, and moderation of alcohol consumption.

Pharmacotherapy typically begins with thiazide diuretics, ACE inhibitors, ARBs, or CCBs.

Clinical Guidelines: Type 2 Diabetes Mellitus Management

Type 2 diabetes is characterized by progressive insulin secretory defect on background of insulin resistanc
Diagnostic criteria include fasting plasma glucose >= 126 mg/dL or HbA1c >= 6.5 percent.

Symptoms include polydipsia, polyuria, unexplained weight loss, and fatigue.

First-line pharmacotherapy is metformin combined with comprehensive lifestyle management.
